

IN8 TECH WHITE PAPER

V 24.6.30

Innate. A manifesto.

Being born human. Carrying a core set of innate abilities. Capable of genius. Equipped with the innate power of creativity, strategy, communication, altruism and reasoning, to name a few. Capable of anything. Limitless. Autonomous. Relentless and resilient.

Yet trapped in a man made world order, distracted by politicized pop culture. Consumed by our own technological creations, manipulated by our own content. Within tiny prints of perpetual consent. Capable of organizing, but yet feeding a broken system with our own actions and inactions. With our silent embrace of new norms, and new technologies conveniently run by the few that profit it all. Based on models trained on our data. Funded by leveraging our engagement. Yet, we earn nothing, yet we have no say, yet we get no bonus while that same Ai, trained and funded by us, the people; takes our place in the workplace. Leaving us in the economic void of low income consumerism, which by its turn silences our dreams, robs us from our innate freedoms. And takes away our ability to think for ourselves long enough to find the obvious solutions and rise above.

So one can't stop to wonder, if so much depends on us, why can't we just turn the table? Why can't we just organize, redirect the engagement, redefine the value, and reclaim the power of our data, expanding the positioning of the users and the holders of the stakes on data tech and disrupt the status quo?

We say we can. We decided we will. And we are just getting started.

IN8 is a people first tech solution. It's the blueprint of a global tech uprising, led by powerful global communities, powered by a decentralized business model. Decentralized from its core and through all its layers. With one single goal: develop an ecosystem that financially fuels freedom in a massive global scale, impacting key segments of society, stacking the value of our innate abilities and delivering our innate rights to live a life of no man made constraints, resetting corporate centric economic norms and giving space to people centric technologic solutions. Giving back people the power over their data, the value of their time, the profitability of their engagement.

And now that you know, will you join us?

Genesis: The Beginning.

iN8 is an ecosystem of interlinked businesses that together, create a powerful symmetry producing self-sustainability and the ability to foster decentralization. iN8 blends data technology, hardware and software development, and P2P sales and marketing solutions specializing in innovative technology models targeting to reshape the socio-economic landscape of the data industry through not only open source technologies but also through inclusive and collaborative business strategies.

iN8 Tech, recently has developed a Fusion Cloud™ Model deploying Phase 1 of a global cloud network hosted in strategic locations with the goal of making server ownership available worldwide through products like Cloud X, NOVA Hosting and IN8 Hub. By collaborating with impact focused marketing and sales organizations with reach in key geographic areas, iN8 Tech brings the power of their innovative solutions to the world in an inclusive and socially responsible way.

iN8 collaborative expansion plan includes working with industry pioneers and innovators aiming to improve global access and develop ideas in the Ai space by making available open source Ai capable tools and resources. iN8's participation in Ai will focus on inclusive access as well as strategic contribution to promote development and adoption of technologies and solutions to improve user experience and quality of life around the world.

Mission, Vision & Innate Power.

How will technology impact the world? The answers will depend on who is behind it. And if it depends on iN8, the people will be behind it, and above it. By developing the technologies people need and building models people benefit from, iN8 will cultivate the next generation of tech leaders, developers and entrepreneurs to reshape the tech scene and bring the creative and economic power back to the many instead of the few.

iN8 Tech is not entering the market to be another cloud technology company. iN8 is entering the market to position a tech revolution. By the people, for the people, globally.

End to End Impact: Introducing CloudX. The First Ever Fusion Cloud™ .

From conceptualization to implementation, from idea to market; inclusive social impact is one of the core foundations of iN8. Each technology model we develop is created with a clear goal in mind, impacting the lives of as many people as possible.

With the hyper boom of data technology and cloud computing taking over the tech industry, it became a key strategic move to strive for global positioning in those markets, because even with major corporations holding the capital advantage, the pace of the economic growth and global demand make room for innovation if paired with differentiated business models.

Strategic licensing deals with sales organizations abundant in technology educated demographics, early adopter communities, international reach and experience with emerging and developed markets, demonstrated a powerful strategy for fast scaling and global expansion, creating a unique opportunity for a new concept: CloudX, iN8's Fusion Cloud™

What is a Fusion Cloud ?

Fusion Cloud is a blend of private and public cloud technology where cloud hardware owners purchase hardware resources that are deployed to the iN8 Cloud, blending the traditional use case of a data-center based private cloud with a hybrid use case where **unused resources** are contributed to a public cloud (CloudX) and monetized.

This concept allows for the participation of the average entrepreneur in an economic sector otherwise blocked off by an extremely narrow supply chain with extremely high minimums and requirements, creating an important level of impact for the independent entrepreneurial segment of the global population.

Fusion Cloud & Cloud X utilize a proprietary software management system integrating the cloud servers and managing the space between demand from different verticals creating flexible revenue possibilities and innovative use cases.

CloudX Node Owner

CloudX Node Owners are the keystone of the iN8 ecosystem; Node owners enable us (we the people) to control our own destiny, To take control of our data (today's digital gold). Node owners are rewarded a percentage of revenue that is generated by their resources being allocated to the iN8 Cloud.

As Cloud tenants purchase cloud resources a portion is distributed back to the node owner for the use of their resources.

Public Cloud Revenue is any revenue generated by the effort of the DAO or Affiliated Companies that are NOT CloudX Node Owners.

Private Cloud Revenue is any revenue that is referred to the Cloud via a CloudX Node Owner. A Node Owner can onboard (Load) Cloud Customers via their Dashboard and receive a larger percentage credit for the revenues generated.

Below are examples of how revenue is calculated.

HOW WE CALCULATE REVENUE

PUBLIC CLOUD REVENUE:

Each retail product has a flat dollar amount that is allocated to cloud resources when sold. The amounts are tallied and divided by the total number of online nodes.

Retail Products

- NOVA Web Hosting (VM)
- IN8 Drive
- IN8 HUB
- Blockchain Nodes (VM)

A predetermined amount of each VM rental is allocated to the cloud resources when sold. The amount is variable so the sales reps can negotiate the best possible price for the Enterprise client. All Enterprise revenue is pooled between all active deployed nodes.

Enterprise Products

- Compute
- Storage: HIPAA
- GPU

PRIVATE CLOUD REVENUE:

If a node owner “loads” a Cloud Customer (Retail or Enterprise) to the Cloud, the Node owner's resources will be maxed (max TBD) out in the Private Cloud calculation first. Any additional resources needed to support the Cloud Customer will utilize resources from the public cloud.

Revenue Reporting Examples:

Public Cloud: Formula: Product Revenue / Number of Total Nodes Deployed

- \$100,000 Cloud Revenue / 100 Nodes (deployed in current month)
 - $\$100,000/100 = \$1,000$ per Node
 - Revenue generated by the Public Cloud is subject to a Rev Share of up to 50%.
 - Applying the Revenue Share to the above calculation the totals are as follows:
 - Each Node Owner receives \$500
 - IN8 Cloud Retains \$500.

Private Cloud: Formula: Private Cloud Revenue / Your Node(s)

- **Example 1:** Joe loads in \$2,000 in Cloud Consumption via his Node Owner Login.
 - Joe receives \$2,000 in Cloud Revenue.
 - 100% up to the MAX of his resources,
 - max private cloud revenue for owners is \$5,000
- **Example 2:** Joe brings in \$10,000 in Cloud Consumption via his Node Owner Login. Joe owns 1 Basic Node, his resources are OVER max capacity.
 - Joe would receive the max revenue for his resources (\$5,000)
 - All excess revenues will be applied to the Public Cloud Calculation.
 - Public Cloud would receive \$2,500 applied to the calculation of Public Revenue
 - IN8 Cloud - \$2,500

***Nodes are only deployed on the 1st of each month.**

Phase 1.1 Creating Demand Through UX - Introducing NOVA

With Cloud X growing fast around the world through the collaborative sales model, Phase 1.1 presents a key milestone in software development, creating a new vertical targeting the same niche, an economic plug & play web solution for digital entrepreneurs.

NOVA packages the fundamental needs of independent entrepreneurs, web hosting, web builders, and web templates, with a proprietary value-add bundle of preset strategies, pre-built authority pages, and a robust library of royalty free content. The content rich user experience brings a unique solution well timed to support entrepreneurs, digital creators and influencers expand their brands and scale their businesses while saving on web hosting costs.

NOVA aims to create global demand and is 100% hosted through Cloud X servers worldwide, a perfect pairing for loading tenants and generating a pipeline of revenue for Cloud X owners and establishing a highly scalable and self-sustaining business model.

Phase 1.2 Data Privacy Matters - Introducing IN8 Hub

IN8 Hub is introduced as the first software presented by IN8 Labs, the software development arm of the corporate ecosystem. Focused on giving people control over their data and full privacy through collaboration, IN8 Hub comes with 4 core software products, IN8 Drive, for file and photo storage, IN8 Docs for seamless document creating and collaboration, IN8 Connect, for team communication and IN8 Desk, with easy sync of contact, calendar and email.

The launch of the IN8 Hub is a key step on establishing the brand through mainstream consumer products offering key differentials speaking to a global demographic that is ready to opt for hosting products that prioritize privacy and data ownership, well timed with the global dissatisfaction trend towards hyperscalers selling customer data and having loose privacy policies. Leaving strategic space for IN8 to stand for the people and protect their privacy rights with the privacy focused open source technology used to develop IN8 Hub.

Culture Shifting. Movement Building.

As significant global impact follows culture, Cloud X, NOVA and the IN8 Hub pair as an important first step towards a global movement. A movement where the average individual gets a chance to participate in the biggest economic boom technology has ever seen, positioning themselves as owners and entrepreneurs, instead of mere consumers.

In a historic moment where the global workforce experiences a major shift in HR contracting and career development, iN8 Tech takes a stand to create solutions enabling people towards new business solutions in technology instead of being left behind jobless.

As Cloud X, NOVA and IN8 Hub expand globally, iN8 plants its flag and creates a new sector of tech business owners and global influence, gaining the momentum to power up a global movement.
